NursEduPal@Euro: a strategic partnership for the improvement of palliative care education

The NursEduPal@Euro team

Project approach

Overview of the NursEduPal@Euro Intellectual Outputs

I01

Core competencies required for providing generalist palliative care

12 analytical themes for European core competencies have been defined in a 3 phase approach. These form the basis on which the educational materials of the project are grafted.

Product: report

I02

Simulation as a powerful enabling experiential learning method to complement bed side training

Simulation is an educational strategy in which real experiences are replaced with guided ones to allow learners to practice skills and develop clinical expertise without any risk of patient harm. It is a validated alternative for bed-side training.

Product: 4 simulations worked out in a template

I03

An e-learning to get you started in simulation education

This e-learning, made to support teachers, is a guide through the 7 steps to consider when making high-quality simulation experiences that will facilitate learning.

Product: e-learning consisting of 7 modules, a template, and guidelines

I04

Playful learning: gamification as an exciting tool in palliative care education

A linear educational palliative care escape game has been developed that requires teamwork, communication and delegation skills, as well as critical thinking and attention to details.

Product: a fully detailed escape game and guidelines

I05

The virtual showroom: showcasing the NursEduPal@Euro products

The project website not only provides project information and access to all developed educational materials, it also is the gate to a community of palliative care educators.

Product: website

I06

Clinical reasoning and moral debate as tools to develop a strong sense of self-efficacy of future nurses

Learning to provide safe and quality palliative care requires technical expertise and experience. But equally important is the ability of critical thinking and clinical judgment and the skill to facilitate a structured conversation where professionals jointly reflect on a concrete moral question.

Product: golden standards, guidelines, and evaluation rubric

I07

A European palliative care curriculum matrix for nursing education institutions

The integration of the core competences and the educational materials in a thoughtful teaching tool to be used to shape undergraduate nursing curricula.

Product: report

I08

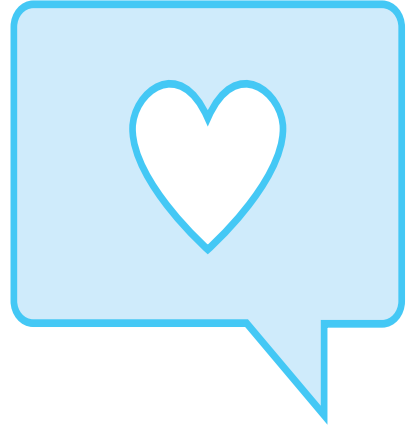

Graphic novels as a starting point for engaging in a palliative debate with your students

Let your students choose a story and after they have read it, start the group discussion. A palliative debate can be organized at any point in the program to facilitate the conversation on palliative care.

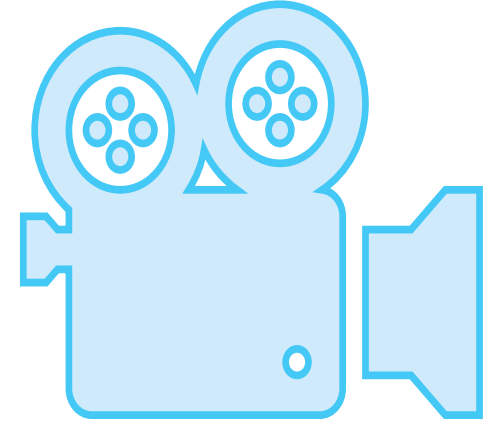

Product: 5 graphic novels and guidelines

Available soon: access all NursEduPal@Euro products at nursedupal.eu

101 Core Competencies

Co-funded by the
Erasmus+ Programme
of the European Union

This project has received funding from the European Union's Erasmus Plus programme under grant agreement No. 2020-1-BE02-KA203-074740

Process to set the palliative care core competencies

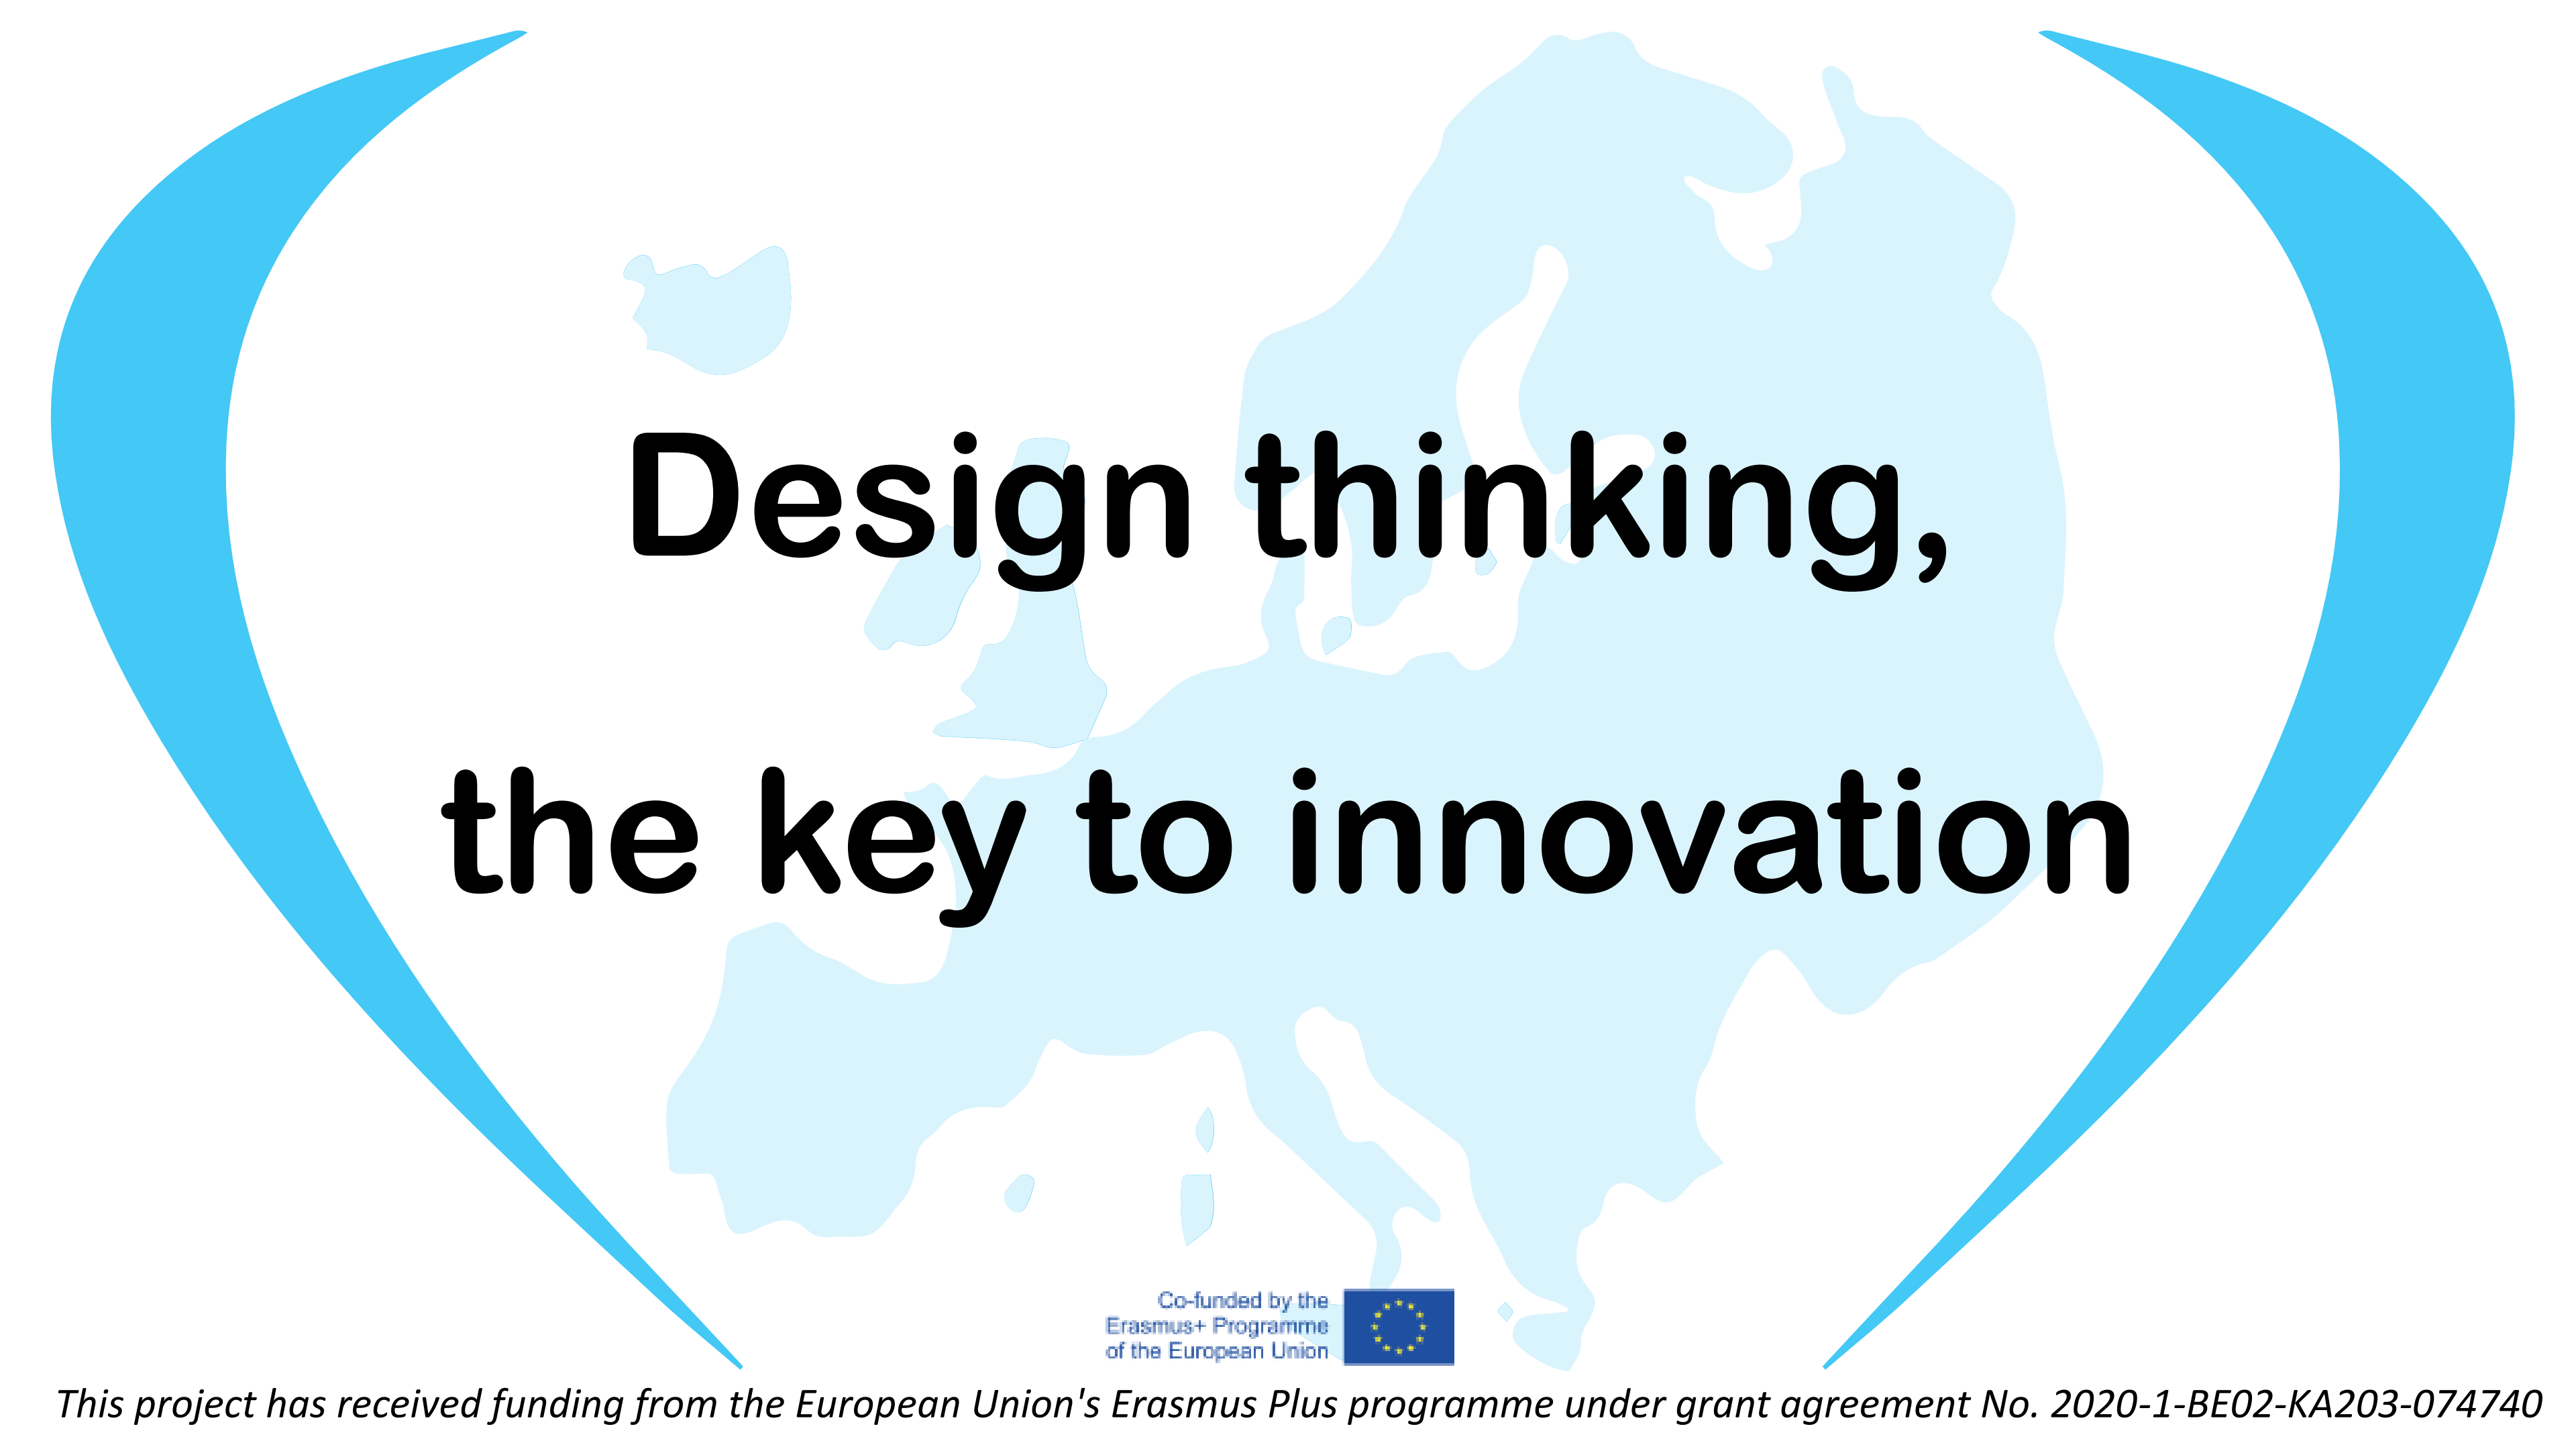

The synthesis of all the data resulted in 12 core competencies

- In the second and final stage, the data of the systematic review and NGT were merged
- This resulted in 12 core competency categories

1. The holistic nature of palliative care
2. Organizing palliative care
3. Pain management in palliative care
4. Symptom management in palliative care
5. Holistic support in palliative care
6. Holistic communication, encounter, and interaction in palliative care
7. Empathy in palliative care
8. Spiritual and existential in palliative care
9. Ethical and legal issues in palliative care
10. Teamwork in palliative care
11. Self-awareness and self-reflection in palliative care
12. End-of-life care

Each of the 12 core competency categories consists of subthemes

Competence in <u>organising</u> palliative care	Organizing palliative care Critical evidence-based thinking and decision-making in palliative care Advanced care planning in palliative care Advocacy in palliative care Palliative care services
Competence in pain management in palliative care	The multidimensional aspects of pain in palliative care/Total pain Pain assessment in palliative care context Pain management in palliative care

Design thinking, the key to innovation
